

DÉLKA KRUŽNICE = OBVOD KRUHU

$$o = 2 \cdot \pi \cdot r$$

$\pi$  [ $\text{pi}$ ]  
konstanta

r - poloměr kružnice, kruhu

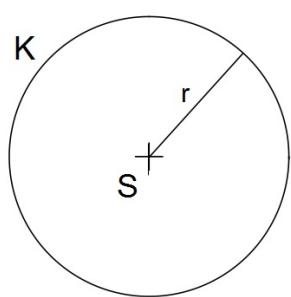

$$\pi = \frac{o}{2r}$$

$\pi$  - Ludolfovo číslo  
 $\pi \doteq 3,14$

poznámka z historie: Ludolf van Ceulen  
- matematik  
a učitel šermu (v 16. století)

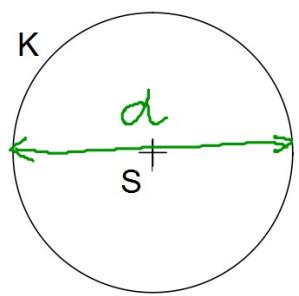

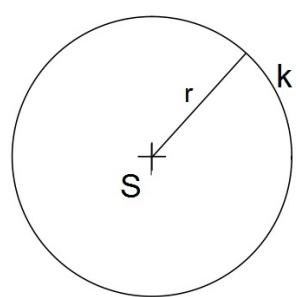

- přibližná hodnota používaná v matematice je  
zmiňovaných 3,14 nebo ve tvaru zlomku  $\frac{22}{7}$

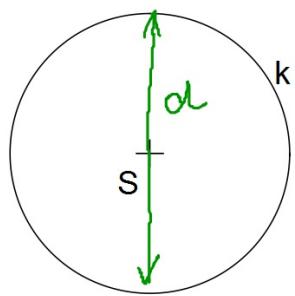

$$\sigma = 2 \cdot \pi \cdot \underline{r}$$

polomer

$$\sigma = \pi \cdot d$$
$$\underline{d} = 2 \cdot r$$

primär

$\pi$  - kalkulačka

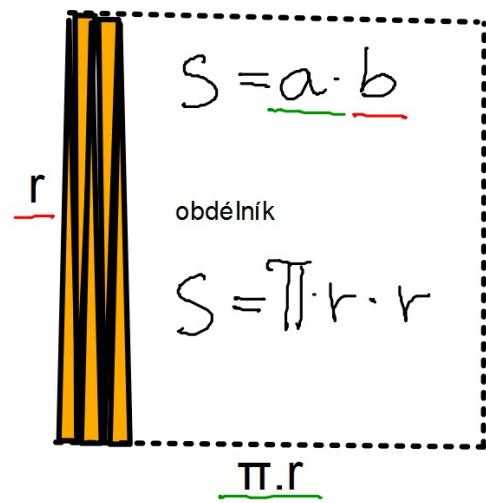

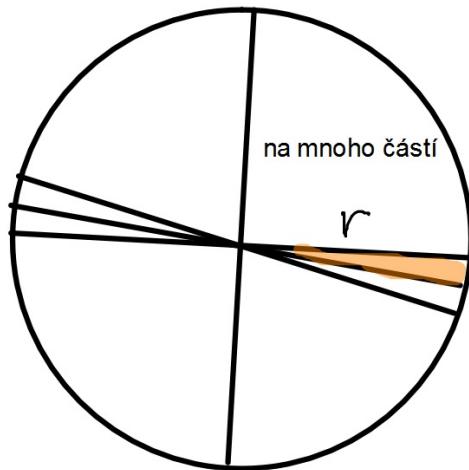

$\frac{\pi}{\text{EXP}}$  → SHIFT  $\frac{\pi}{\text{EXP}} \quad (\square)$

ridim hodnotu  $\pi$

$$\pi \rightarrow 3,141592654$$

$$\frac{22}{7} \Rightarrow 3,14285\dots$$

## Obsah kruhu

$$S = \pi \cdot r \cdot r$$

$$\boxed{S = \pi \cdot r^2}$$

$$o = 2\pi r \quad \text{délka} = \underline{\text{poloměr}} \quad r$$

$$S = \pi r^2 \quad -\pi \text{ (povinné)} \\ [m^2] \quad 2 \text{ musí být}$$

$$S = \pi \cdot r^2 \\ \text{cislo} \quad \text{délka } [cm \rightarrow m]$$

$$K(S; 6cm)$$

$K(S; 6\text{cm})$  -vypočítej obvod i obsah

$$o = 2\pi r$$

$$o = 2 \cdot \pi \cdot 6$$

$$\underline{\underline{o = 37,7 \text{ cm}}}$$

$$S = \pi r^2$$

$$S = \pi \cdot 6^2$$

$$\underline{\underline{S = 113,1 \text{ cm}^2}}$$
